

Date Collected: 09/27/2024

Date Received: 09/27/2024

Date Reported: 09/27/2024

Fasting: Not Given

Ordered Items: Methadone (Dolophine), Serum

General Comments & Additional Information

Clinical Info: NORMAL REPORT

Date Collected: 09/27/2024

Methadone (Dolophine), Serum

Test	Current Result and Flag	Previous Result and Date	Units	Reference Interval
Methadone (Dolophine), Serum <small>A, 01</small>	350		ng/mL	100-400
Detection Limit = 25				
Multiple parameters can impact methadone reference intervals. Up to a 17-fold variation in methadone concentrations can be found in patients given the same dose due to individual differences in P450 enzyme systems. For dose tolerant individuals in methadone maintenance programs investigators have recommended levels of 100 ng/mL to 1200 ng/mL. However these levels can have an adverse impact on drug naive individuals.				

Disclaimer
The Previous Result is listed for the most recent test performed by Labcorp in the past 5 years where there is sufficient patient demographic data to match the result to the patient. Results from certain tests are excluded from the Previous Result display.
