

CLINICAL DRUG TESTING

Insight analytics dashboard: Data trends at a practice level and beyond

Intended use

To improve patient care decisions, consider running a report using a new clinical drug testing dashboard powered by Labcorp Insight Analytics®. The new tool was built with flexibility in mind, enabling practices to filter and sort data by their needs with numerous clinically actionable insights. These insights can help you identify high-risk patients so you can implement more targeted clinical practices. With access to summaries of expected and unexpected findings, drug class positivity statistics and more, you'll have a more comprehensive view of evolving drug trends in the communities you serve.

Report ordering instructions

Contact your Labcorp sales representative to schedule a demonstration.

Dashboard overview

Clinical Drug Testing Summary

Get a high-level view of patient drug testing within the past six months. Some of the key trends include specimen adulteration and testing frequency, with an option to get down to patient-level information.

Monthly Order Code Utilization Summary

Tap into your practice's last 12 months test ordering patterns.

Summary of Expected vs Unexpected Results

Sending in a prescribed medications list? Get a snapshot of patient compliance and view patients within the unexpected absent and unexpected present categories. Assess your practice trends against a broader population to make informed patient management decisions.

Drug Class and Subclass Positivity Rate Comparison

Identify positive drug class trends within your practice and access insights into community drug trends. Our dashboard allows providers to filter by drug class/subclass, region and more, offering a deeper understanding of changing trends within your patient base and the community.
