

# Convenient wellness testing with Labcorp

Labcorp offers a Diabetes Risk (HbA1c) Test, which evaluates blood sugar levels over the past 8-12 weeks.

Labcorp is committed to providing flexible options and easy access to screening services for your employees. The Labcorp Diabetes Risk (HbA1c) Test is a useful tool to screen for prediabetes and diabetes.

## Your average blood sugar levels serves as a critical indicator of your health.

Consistently elevated blood sugar levels often indicated prediabetes or diabetes: a serious disease that can ultimately affect the health and function of other parts of the body including the nervous system, cardiovascular system, eyes and kidneys.

This at-home fingerstick test measures blood sugar levels over the past 8-12 weeks and is a useful tool for screening for prediabetes and diabetes. Samples are easily returned to the lab for testing. Additionally, unlike standard kits for the industry, we can ship to P.O. boxes via USPS.

## To request an at-home Diabetes Risk (HbA1c) Test, employees follow a few steps:

1. The employee requests the at-home kit via WellConnect Plus™
2. The employee confirms their mailing address and completes the order
3. The employee receives kit via USPS within 24-48 hours
4. Sample is shipped back to Labcorp using the prepaid USPS postage envelope
5. Results are available in the Labcorp Patient™ Portal within 1-3 business

## Participants stay informed throughout the process:

- Order confirmation
- Shipment notification
- Delivery confirmation (kit received at the lab)
- Confirmation of results

## What does this test measure?

The Diabetes Risk (HbA1c) Test measures HbA1c levels and evaluates blood sugar levels over the past 2-3 months.

## Who should take this test?

Adults with diabetes or prediabetes can benefit from this test.
