This document is provided as an informational service to Labcorp accounts. The document contains certain Local Coverage Determinations issued at various times by the Medicare Administrative Contractor (MAC) and National Coverage Determinations issued by the Centers for Medicare and Medicaid Services. The information compiled herein is as of October 1, 2025. There can be no representation or warranty as to the accuracy or completeness of the information or that use of this information will comply with the local or national policies. To ensure the accurate and appropriate use of the information, it is recommended that the MAC be consulted. Primary sources (i.e. MAC publications, notices, and advice) should be consulted prior to the use of this information for purposes other than for submitting diagnosis codes to Labcorp. This is particularly important since information is often affected by ongoing developments.

Medicare Medical Necessity

The Centers for Medicare and Medicaid Services (CMS) requires MACs to establish policies to ensure the medical necessity of services being paid for by the Medicare program. CMS itself established national policies and effective November 25, 2002, implemented the National Coverage Determinations (NCDs). MACs will approve payment only for those particular test procedures when they have determined them to be medically necessary for the patient. As a result, a claim submitted for payment of a test on a local or national list without a specific diagnosis code (ICD-10-CM) that indicates medical necessity based upon the local or national policies will result in denial of payment for these services. This policy applies to all Medicare Part B providers of clinical laboratory services.

CMS in conjunction with the National Center for Health Statistics (NCHS) presented guidelines for diagnosis coding. In part these guidelines state:

ICD-10-CM are to be used at their highest level of specificity, e.g.,

- Assign 3-digit codes only if there are no 4, 5, or 6-character codes within that code subcategory,
- Assign 4, 5, and 6-character subcategory codes only if there is no 7-character extension code for that category
- Assign 7-character extension code for those categories where it exists.
- Assign a "X" placeholder code(s) if a 7-character extension code is needed and there are no 4, 5, or 6 characters within that subcategory.

ICD-10-CM is composed of codes with either 3-7 characters. Codes with 3 characters are included in ICD-10-CM as standalone codes or as the heading of a category of codes that are further subdivided by the use of fourth, fifth, and sixth characters and a seventh character extension which provide greater specificity. The first character of a three-character category is always a letter (A-Z); the second and third characters may be numbers or alpha characters; and the fourth through seventh characters can be any combination of letters and numbers. In instances when a letter or number is not an option for the fourth, fifth, or sixth characters, the letter "X" is used as a placeholder to allow future expansion without disturbing the coding structure.

The MAC, Novitas Solutions, Inc., has established specific prepayment medical necessity documentation requirements for certain laboratory tests. These local tests plus the national ones are listed on the following pages. If you have any questions regarding the policies listed in this document, please contact the Novitas Solutions, Inc. Medicare Part B office at 877-252-8782.

Novitas Solutions, Inc. will not pay for the listed tests unless the claim is accompanied by an appropriate diagnostic code. For your convenience, we have developed this document from information published by Novitas Solutions, Inc. or CMS to provide you with a list of medically acceptable diagnostic codes for each of these tests.

So that we can properly bill the appropriate party or MAC, we ask that you include an ICD-10-CM diagnosis code on the test request form when ordering each of these tests for beneficiaries. We do ask that you include the specific ICD-10-CM code(s) rather than a descriptive diagnosis on each patient. It is critical that the diagnosis codes that you provide are consistent with those documented in the patient's record.

Determining Necessity of Advance Beneficiary Notice (ABN) Completion*

Diagnose. Determine your patient's diagnosis.

1. **Document**. Write the diagnosis code(s) on the front of the requisition.
2. **Verify**. Determine if the laboratory test(s) ordered for the patient is subject to Local Coverage Determination or National Coverage Determination. This information can be located in the policies published by the MAC, CMS, or www.LabCorp.com/MedicareMedicalNecessity.com
3. **Review**. If the diagnosis code for your patient **does not** meet the medical necessity requirements set forth by Medicare or the test(s) is being performed more frequently than Medicare allows, an ABN should be completed.

*An ABN should be completed for all tests that are considered investigational (experimental or for research use) by Medicare.

Payment Denials and Advance Beneficiary Notices

The Medicare program will allow the laboratory to bill the patient for denied limited coverage services only if an Advance Beneficiary Notice (ABN) is completed, signed and dated by the patient, and forwarded to the laboratory prior to testing. Please provide the signed ABN with the original order. It is the physician's responsibility to ensure that the beneficiary receives and signs an ABN to accept financial responsibility if Medicare does not pay for these services.

ABNs may be obtained from your LabCorp representative.

Policy Updates

LabCorp will continue to provide you with information regarding specific coverage limitation policies of the MAC and CMS, in the event that new policies are issued or existing ones are changed or clarified.

Although all health care providers are being affected by these types of policies, we are very sensitive to the challenges these changes bring to you and your patients. Please be assured that we will continue to work to lessen the impact upon you and your patients.

Contact your local billing representative if you have questions regarding this information.

Allergy Testing

86003, 86008, 86160, 86161, 86162, 86332, 86485

LIMITATIONS:

The following tests are considered not medically reasonable and necessary.

- Provocative testing other than those mentioned above
- Blood, Urine or Stool micronutrient assessments
- Qualification of Nutritional Assessments
- Environmental Cultures and Chemicals
- Live Cell Analysis
- Passive Transfer
- Rebuck Skin Window
- Leukocyte Histamine Release
- Metabolic Assessments
- General Immune System Assessments
- Secretory IgA (Saliva)
- Qualitative multi-allergen screen
- Food Allergenic Extract Immunotherapy
- Cytotoxic Food Testing

Allergen specific IgE; qualitative, multiallergen screen is a non-specific screen that does not identify a specific antigen. This is a screening tool and therefore not covered by Medicare.

NCD 110.11 outlines limitations for food allergy testing and treatment. Refer to CMS Manual System, Pub 100-03, Medicare National Coverage Determinations (NCD) Manual, Chapter 1, Part 2, Section 110.11 for details.

Allergen-specific IgG and IgG subclasses measured by using immunoabsorption assays and IgG and IgG subclass antibody tests for food allergy/ delayed food allergy /delayed food allergic symptoms or intolerance to specific foods are considered experimental and investigational, as there is insufficient evidence in the published peer-reviewed scientific literature to support the diagnostic value of these tests for allergy testing.

In-vitro testing is covered when medically reasonable and necessary as a substitute for skin testing; it is not usually necessary in addition to skin testing.

Utilization Guidelines

In accordance with CMS Ruling 95-1 (V), utilization of these services should be consistent with locally acceptable standards of practice.
The number of tests performed should be judicious. All patients should not necessarily be tested for the same antigens.

Medicare is establishing the following limited coverage for CPT codes 86003 and 86008:

Assays for Vitamins and Metabolic Function

82180, 82306, 82379, 82607, 82652, 82746, 83090, 83698, 84207, 84252, 84425, 84446, 84590, 84597, 85385, 86352

Limitations:

For Medicare beneficiaries, screening tests are governed by statute. Vitamin or micronutrient testing may not be used for routine screening.

Once a beneficiary has been shown to be vitamin deficient, further testing is medically necessary only to ensure adequate replacement has been accomplished. Thereafter, annual testing may be appropriate depending upon the indication and other mitigating factors.

Notice: This LCD imposes the following limitations to the tests addressed in this LCD. These limitations will support automated denials as follows:

- Diagnosis to procedure limitations only (86352)
- Frequency limitations* only (82180, 84252, 84425, 84446, 84590, 84597)
- Diagnosis to procedure and frequency limitations* (82306, 82652, 82379, 82607, 82746, 83090, 84207, 85385, 83698)

Utilization Guidelines

Medicare recognizes certain tests may exceed the stated frequencies. Should a denial occur, additional documentation can be submitted to support medical necessity. Payment for additional tests may be allowed in selected circumstances when, upon medical review, the medical necessity of additional services is demonstrated.

Following a review of utilization data at various percentiles of units billed per year, the following frequency limitations are established and are as follows:

82180 (Assay of ascorbic acid) 1 time per year
82306 (Vitamin d 25 hydroxy) up to 3 times per year
82379 (Assay of carnitine) up to 3 times per year
82607 (Vitamin b-12) up to 3 times per year
82652 (Vit d 1 25-dihydroxy) up to 2 times per year
82746 (Assay of folic acid serum) up to 3 times per year
83090 (Assay of homocysteine) 1 time per year
83698 (Assay lipoprotein pla2) 1 time per year
84207 (Assay of vitamin b-6) 1 time per year
84252 (Assay of vitamin b-2) 1 time per year
84425 (Assay of vitamin b-1) 1 time per year
84446 (Assay of vitamin e) 1 time per year
84590 (Assay of vitamin a) 1 time per year
84597 (Assay of vitamin k) 1 time per year
85385 (Fibrinogen antigen) up to 3 times per year
86352 (Cell function assay w/stim) frequencies not determined

   ThermoFisher Oncomine DX Target Test for Non-Small Cell Lung Cancer (NSCLC) is a 23 gene panel including a 3 gene target test (companion test) approved by the FDA in June 2017 for NSCLC from tissue specimens. It can simultaneously identify the three gene variants that are a key to targeted therapy selection: BRAF and ROS1, and EGFR. The targeted therapies are dabrafenib (Tafinlar) in combination with trametinib (Mekinist), crizotinib (Xalkori), and gefitinib (Iressa), respectively. These three drugs are approved therapies for NSCLC patients with the above gene variants. Oncomine DX Target Test is the only FDA approved companion test that detects ROS1 fusions and that detects BRAF V600E, but it does not detect ALK fusions.

   The literature does appear to show clinical validity for all tests and utility for the companion testing. Clinical trials ongoing for the remainder of the panel and as such will not be addressed here. Decision on coverage is based on the companion testing only.

14. Myeloma Gene Expression Profile (MyPRS) (PROG) isolates plasma cells from myeloma patients, extracts DNA, which is then subjected to MicroArray testing and application of validated software programs to identifying patterns of genetic abnormalities. Seventy highly predictive genes have been identified and correlated to myeloma early relapse. MyPRS gives a predictive risk signature as high-risk or low-risk at this time. A high risk score predicts a less than 20% three-year complete remission where as a low-risk predicts a five-year complete remission of greater than 60%. The predictive value for the stratification of therapeutic interventions allows these patients to be treated in a more personalized manner based on their own genetic profile.

    This test is considered reasonable and necessary only after the initial diagnosis of multiple myeloma has been made and will be available to be used in the stratification of therapeutic interventions. It would be inappropriate to use this test as a diagnostic tool or as a monitoring device of ongoing therapy. Other testing is available for this function.

    The coverage is set to include only two clinical settings:
    - Once after initial diagnosis is made (i.e., please use ICD-10-CM code C90.00). In the event MyPRS was not tested at diagnosis of myeloma and there is ongoing initial therapy with persistent disease, MyPRS can be done still as an initial test.

    OR
    - If relapse has occurred and a change in the therapeutic modalities is contemplated (i.e., please use ICD-10-CM code C90.02).

    Please refer to the Utilization Guidelines section of this policy for frequency limitations.

NON-MOLECULAR ASSAYS

1. This LCD does not address ALK and ROS1 FISH assays, which are indicated as predictive biomarkers for Crizotinib therapy, since they are currently covered assays. However, it is expected that non-molecular testing for these two biomarkers should provide adequate predictive information.

2. FISH tests for bladder cancer are complex tests based on precision reagents, controls, and mathematical algorithms, all of which must be validated in clinical trials in order to support cutoff points for critical patient care decisions. Therefore, in each local physician's office or laboratory, this category of testing is not easily replicated by miscellaneous research use or ASR reagents. Novitas will consider the coverage of FISH test kits based on peer-reviewed literature and approved manufacturer claims.

3. Although multiple bladder cancer FISH tests may be covered according to the above general criteria, UroVysionTM Bladder Cancer Kit (UroVysion™ Kit) will be considered medically reasonable and necessary only when performed according to the FDA label (Summary of Safety and Effectiveness Data, Food and Drug Administration, January 24, 2005) as follows:

   The UroVysion Bladder Cancer Kit (UroVysion™ Kit) is designed to detect aneuploidy for chromosomes 3, 7, 17, and loss of the 9p2I locus via fluorescence in situ hybridization (FISH) in urine specimens from persons with hematuria suspected of having bladder cancer. Results from the UroVysion Kit are intended for use, in conjunction with and not in lieu of current standard diagnostic procedures, as an aid for initial diagnosis of bladder carcinoma in patients with hematuria and subsequent monitoring for tumor recurrence in patients previously diagnosed with bladder cancer.

4. The OVA1™ proteomic assay (PROG) will be considered reasonable and necessary when performed according to the FDA label using CPT code 81503:

   - OVA1™ identifies some women who will benefit from referral to a gynecological oncologist for their surgery, despite negative results from other clinical and radiographic tests for ovarian cancer. If other test results suggest cancer, referral to an oncologist is appropriate even with a negative OVA1™ result.
   - OVA1™ should be used by primary care physicians or gynecologists as an adjunctive test to complement, not replace, other diagnostic and clinical procedures.
   - OVA1™ uses a blood sample to test for levels of five proteins that change due to ovarian cancer. The test combines the five separate results into a single numerical score between 0 and 10 to indicate the likelihood that the pelvic mass is benign or malignant.

   OVA1 has been cleared by the FDA for women who meet all of the following criteria:

   - Are over 18 years of age
   - Have an ovarian mass
   - Have surgery planned

   It is not intended for ovarian cancer screening or for a definitive diagnosis of ovarian cancer. Interpreting the test result requires knowledge of whether the woman is pre- or post-menopausal.

5. The Risk of Ovarian Malignancy Algorithm (ROMA™) is a qualitative serum test (PROG) that combines the results of HE4 EIA, ARCHITECT CA 125 II ™ and menopausal status into a numerical score. ROMA™ is intended (per FDA clearance) to aid in assessing whether a premenopausal or postmenopausal woman who presents with an ovarian adnexal mass is at high or low likelihood of finding malignancy at surgery. ROMA™ will be considered reasonable and necessary for women who meet the following FDA labeling criteria:

   - Over age 18;
   - Ovarian adnexal mass present for which surgery is planned; and,
   - Not yet referred to an oncologist.

   ROMA™ must be interpreted in conjunction with an independent clinical and radiological assessment. The test is not intended as a screening or stand-alone diagnostic assay.

Utilization Guidelines

In accordance with CMS Ruling 95-1 (V), utilization of these services should be consistent with locally acceptable standards of practice.

The following tests will all be covered once per lifetime per beneficiary:
- Brain Molecular Biomarkers
- Hereditary neuroendocrine tumor disorders
- Hereditary neuroendocrine tumor disorders; duplication/deletion analysis
- ThyraMIR ,Afirma,ThyGenX, RosettaGX Reveal and ThyroSeq tests
- Should the unlikely situation of a second, unrelated thyroid nodule with indeterminate pathology occur, coverage may be considered upon appeal with supporting

documentation

- CPT code 81540 TUO CTID (Cancer TYPE ID)

While some biomarkers have utility for testing once per lifetime, there are some tumor specific scenarios where repeat testing would be needed for assessment of response to therapy or to identify basis of disease progression. In cases with metastatic or recurrent tumors, repeat testing may be useful in determining further clinical management. Also, biomarkers such as BCR-ABL1 fusion, PML-RARA fusion are useful in monitoring response to therapy and predict a response up to four times per annum.

Coverage Indications, Limitations, and/or Medical Necessity

T**The commercial availability does not ensure that a molecular diagnostic test is indicated for clinical application. Molecular diagnostic testing is a rapidly evolving science in which the significance of detecting specific mutations has yet to be clarified in many circumstances. Analytical and clinical validity as well as clinical utility are the responsibility of the provider, and all testing must meet standards of care.**

Covered Indications

1.GERMLINE (HEREDITARY) MUTATIONS

Medicare considers genetic testing medically necessary to establish a molecular diagnosis of an inheritable disease when all of the following criteria are met:

- The beneficiary must display clinical features of an associated disease, but noting that coverage of molecular testing for carrier status or family studies is considered screening and is statutorily excluded from coverage; and
- The result of the test will directly impact the treatment being delivered to the beneficiary; and
- A definitive diagnosis remains uncertain after history, physical examination, pedigree analysis, genetic counseling, and completion of conventional diagnostic studies.

Note: The following two germline hereditary mutation tests will be considered medically necessary when performed for evaluation of venous thromboembolism. Please see ICD-10 Code group 3.

- Factor II (F2 gene)
- Factor V (F5 gene)

Utilization Guidelines

In accordance with CMS Ruling 95-1 (V), utilization of these services should be consistent with locally acceptable standards of practice, whereby more than once per lifetime testing is not deemed medically necessary, except under special clinical scenarios which will be handled through the redetermination process. The medical record must support the medical necessity of the increased frequency.

Autoimmune (rheumatoid arthritis), is limited to two services per rolling year per beneficiary.
