### Ova + Parasite Exam

These results were obtained using wet preparation(s) and trichrome stained smear. This test does not include testing for Cryptosporidium parvum, Cyclospora, or Microsporidia.

**Result 1**

- No ova, cysts, or parasites seen.

One negative specimen does not rule out the possibility of a parasitic infection.
Dientamoeba fragilis trophozoites Abnormal
Many seen

Endolimax nana cysts. Abnormal
Moderate seen
