Influenza A+B Ag, EIA

**Result:** Negative
**Flag:** Negative

**Reference Interval:**
- **Positive:** 01
- **Negative:** 01

**Comment:** See note

**Please note:**

Because a negative rapid influenza antigen EIA test may not rule-out influenza viral infection, the CDC and other public health agencies have recommended that confirmatory testing using viral culture or nucleic acid amplification should be considered when clinical signs and symptoms are consistent with influenza-like illness, as well as to assist in detecting other respiratory viruses that can produce similar clinical symptoms.
